9. Final M.B.B.S Interns

Details of the Camp Organized:

A free medical health check up visit was organized by the faculty members & students of Index Medical College Hospital & Research Centre in association with **Government Higher Secondary School, Siroliya**. A visit to the government secondary school at Siroliya was organised by the P.Gs & Interns of Index Medical College. The Interns & P.Gs reached the venue by 11:00 a.m to observe the facilities and activities of the school, interact with the students and answer any queries they had. College buses were provided for their transport which reached destination at 11.00 a.m. Interns attended the morning assembly and divided themselves into pairs and attended the classes of the students. After scheduled lunch break, all the students were brought to the playground so that interns could talk to them about medical issues that are faced by their age groups.

Brief report on completion of Activities:

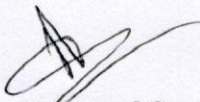

Index Medical College conducted school visit on 15th December, 2018. Students accompanied by two faculty members of the Department of Community Medicine made the visit. Interns took a round of

Registrar
Malwanchal University
Indore (M.P.)

the school campus and made an inventory of all the facilities available to the students. They paid special attention to the first aid room and training of the nurse in the medical room for the school. Interns also attended the morning assembly conducted at the school and gave a short speech on Hygiene in Daily Life. This speech emphasized on the importance of various small practices that the students could easily adopt to be adequately healthy and hygienic. Common mistakes that can pose a risk to the health of an individual were reiterated. After the assembly, interns paired themselves into groups of two and attended the classes with students. Here they observed the teaching methods of the teachers, props used by them and the facilities made available to the students for a comfortable learning session. A note of the ratio of male and female students, availability of sufficient benches, blackboard, entry of adequate sunlight and proper ventilation was made for each class. Next on the agenda was an informal talk with the students - especially the females, regarding the problems they faced and their easy solutions if possible were suggested to them. For this, interns asked the students to write down their problems and submit them in a box during the lunch break. After the break was over, students were asked to gather once again in the assembly ground where they were given *daris* to sit on. Interns then pulled out the anonymous chits and read them one by one, imparting required knowledge simultaneously until the query was resolved.

Students were concerned about a variety of issues they faced at school, home, and among their peers. Common misconceptions prevailing among the students were cleared. Further their questions & queries were answered and among them a few students were asked to talk about their entire experience with the interns. Topics like keeping their food covered, washing fruits and vegetables before use, adopting hygienic practices to cook food, proper sanitary habits, daily baths and hazards of unhygienic conditions were discussed in detail with the students. An interactive session about different problems faced by girls was then conducted. Females were encouraged to attend school regularly, eat nutritious food, monitor their health and seek medical help at appropriate times. Further, all the students were given demonstration of simple hygiene practices including the proper way of washing hands, coughing/sneezing with mouths covered, brushing their teeth, etc were also given by the students.

In this way, at the end of the day, students were motivated to adopt a better and healthier lifestyle, promising to follow the teachings of interns. By 2.00 pm in the evening the Students returned to the college after a successful health and hygiene intervention at the school. In the short span of around six hours, 200 children beneficiaries in the age group between 0-14 years among the total OPD reported for today were benefitted by the advice and regular physical examination by the doctors who visited their School. The School visit could be successfully completed only with the support of staff, faculty and organizers.

- Referred to nearest hospital for immediate treatment and care

The team for camp constituted of P.G. residents. They screened the young students for refractive error, scabies, vitamin A deficiency and nutrition of children and also height and weight of children were also measured. The vision of the children was measured by using snellen's chart. Those having vision less than 6/6 were referred to IMCHRC.

Brief report on completion of Activities:

Patients diagnosed with cataract were referred to Index Medical College for further investigation and treatment.

1. Visual acuity test – by using snellen's chart
2. Provided Vitamin A supplementation to the students having Bitot's spots.
3. Awareness about proper nutrition and hygiene.

The prime objective of this camp was to make awareness among people regarding their health and common diseases. The local people were provided with valuable information regarding uses, misuse, of antibiotics. They also suggested the patients to increase intake of edibles that contains minerals, vitamins and fibers like fresh fruits & vegetables. The team members of hospital including physician, dentist, gynecologist and other P.G students of different specialties at the health camp examined and discussed various health issues with patients arrived at the camp. Free physical examination along with free blood sugar, blood pressure tests were conducted by doctors. They advised the patients with various medicines and consultation during the camp.

People were educated regarding maintenance of hygiene, cleanliness and nutrition. Various other health issues that were diagnosed at the camp were referred to the Index Medical College for detailed examination and treatment.

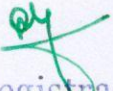

The healthcare condition among the poor is pathetic. These people lack in quality healthcare due to increased cost, lack of doctors and medicines. Healthcare camps are the only hope for the poor people who cannot afford to pay for expensive treatments or medicines. Therefore patients are treated with proper care, love, and respect in the camps. There is no discrimination done at any stage of treatment. Healthcare camps are the only hope for the unprivileged community where their problems are heard and resolved with respect and dignity.

For this health camp, total number of OPDs reported is 320 and total no. of IPDs reported is 36. Camp was successfully organized and co-ordinated by faculty and students of Index medical college. Doctors and residents of different specialties from Index Medical College Hospital & Research Centre examined the patient with different disease & problems and recommended them the medication as applicable to them and the health camp ended at 02:00 p.m. with great success.
